

Gel Manhole Insert

The Ecosorb® Gel Manhole Insert is a perforated inflow protector that is designed to allow odorous sewer gases to pass through a barrier of Ecosorb Gel odor neutralizer. Upon passing through the Ecosorb Gel layer the odorous gases are “scrubbed” to yield an odor-free effluent air stream.

The Ecosorb Gel Manhole Insert is designed to hold one gallon of Ecosorb Gel. The life of the Ecosorb Gel will be determined by the amount of airflow through each particular manhole application. From our experience, the estimated life will be 3-5 weeks*. Units are available in two standard sizes, but can be made to fit any size manhole upon request.

***Extreme cases could cause variations and modifications may be necessary**

TECHNICAL INFORMATION

- Available in both 24” and 36” manhole cover sizes
- There should be approximately 120-140 perforations per Ecosorb Manhole Insert
- Perforations should be 15/64” – 1/4” in diameter

IDEAL FOR

- All manholes (downtown areas, high traffic areas, adjacent to sensitive entities, etc.)
- Storm drains with odor issues

ECOSORB GEL

Ecosorb Gel is designed to eliminate odor in the air. The continuous release formulation works around the clock, to provide constant, 24/7 odor control. It is especially effective for combating persistent odor problems that may not be avoidable or correctable.

With the purchase of 55-gallons or more of Ecosorb Gel, OMI will provide two predrilled and fitted insert units at no cost. Additional units are available for sale from OMI or provided by the customer.

Ecosorb® Remarkably effective. Surprisingly simple.
